iowa Station Assists Sow Before Breeding With Rapid Increase In Feeding of Protein.

A breeding practice used at the lowa Agricultural station should be worth remembering by every hog raiser in an alfalia district, since alfalfa contains a high percentage of protein, almost too much for a single feed. With a view of increasing the number of offspring farrowed at the lowa station they assist the sow be fore breeding with a rapid increase in the feeding of protein, which is called "flushing." This seems to stimulate the production of ova or life germs, which may later be fertilized by the sire, and consequently this tends toward an increase in the size of the

It has been found that where a large amount of protein is fed just before the breeding season that the sows will not only require less services, but more pigs will be farrowed than if seant rations are given. For best results it is well to have the sows on pasture. For best results also flushing should commence about ten days before breeding, or a little so er. It is also necessary to have a boar of strong constitution in order that sufficient ovas be fertilized. age, ment meal, skim milk and such foods are used in susplying protein.

## BEST FEEDS FOR FATTENING

Better to Grind Grain and Feed in Form of Thick Slop Than to Feed It Alone.

It generally is estimated that rye has a feeding value about 19 per cent lower than that of corn when fed to fattening hogs.

It is better to grind the grain and feed it in the form of a thick slop than to feed it whole. The dry meal forms a sticky mass in the bog's mouth that is not relished.

Some feed such as tankage, skimmilk or shorts should be fed in connection with the rye.

Rye is lacking in protein and does not give the best results when fed alone. It also will be a good plan to feed some corn in connection with the rye if the corn can be obtained at a reasonable price.

### EASY TO LOAD BALKY HORSE

Tie Rope Around Animal's Rump and Pull on That as Well as Halter Will Prove Effectual.

While loading horses in a car we were troubled by one large animal balking, and although we tried every expedient we could think of, the beast could not be induced to enter the car,
